DENTAL LIVE SHOWS

<p>09:30</p>	<p>01:30</p>	<p>Prof. Ahmed Abd EL-Rahman (Egypt)</p>	<p style="text-align: center;">An Inside Look into Endodontics: Scientific Evidence and Clinical Experience</p> <p>During the past few years, so many advancements changed the way how root canal treatment is performed. Cone beam computed tomography revealed the third dimensions with unlimited applications in Endodontics. Ultrasonics has infiltrated into almost all phases of endodontic treatment, starting from coronal access, removal of post and broken instruments, and retro-cavity preparations. Integrating electronic apex Locators, rotary NiTi systems and efficient irrigation techniques gave us a more predictable endodontic procedures with higher and longer success. Doing all these procedures under high magnification and illumination using the surgical microscope has opened new frontiers to the clinicians. This patient life demonstration will integrate these high technologies and armamentarium to manage an endodontic case in a safe and efficient way.</p>
<p>01:30</p>	<p>02:00</p>	<p>B r e a k</p>	
<p>02:00</p>	<p>06:00</p>	<p>Dr. Ahmed El-Zohairy (Egypt)</p>	<p style="text-align: center;">Esthetic Composite Layering; Correct as you Go</p> <p>Chair side restoration of anterior fracture tooth considers being a big challenge for dental operators regarding time and esthetic outcome. However, improvement in composite resin properties, handling characteristic and shad system can assist the operator to overcome such a challenge. New shade system that utilizes less numbers of shades and possibility to correct color as you build up composite layers is now available.</p>

DENTAL LIVE SHOWS			
09:00	01:30	Dr. Amr El-Khadem (Egypt)	<p style="text-align: center;">Computer Guided Implant Placement: A Simple Precise & Economic Approach</p> <p>The utilization of virtual implant planning and computer aided surgical guides have been proposed since more than 20 years. Such approach allows for precise prosthetic driven implant placement in a minimally invasive pattern with reduced intra-operative time and few post-operative complications. Despite of the enormous advantages offered by such protocol, the technique is not utilized by many implantologists. Practitioners tend to place implant in the conventional manner as it is cheaper and does not rely on others to plan and fabricate the guide. Guided implant protocol has been also associated with accessibility and cooling problems together with a lot of confusion related to using the complex surgical kits.</p> <p>Objectives:</p> <ul style="list-style-type: none"> - Describe the basic concept and steps of guided implant protocol - Introduce a new approach that will allow all practitioners to plan and fabricate an in-office guide with high precision and low cost. - Introduce a new compact surgical kit design to simplify the intra-operative procedures and solve accessibility and cooling problems.
01:30	02:00	B r e a k	
02:00	06:00	Prof. Konstantinos Valavanis (Greece)	<p style="text-align: center;">Implant Therapy Strategies for the Aesthetic Zone</p> <p>The achievement of an aesthetic implant-supported restoration is a constant challenge to the restorative dentist. Due to the circular shape of the implant and its smaller diameter, when compared to the root of a natural tooth, a dilemma inevitably occurs of how to construct an artificial crown that will imitate the natural tooth crown form. The appearance of the surrounding soft tissue is of major importance, and various techniques have been developed to guide its topography. The lecture will show individual strategies for implant therapy in the aesthetic zone with step-by-step clinical procedures from diagnostic models through surgery with immediate provisional restoration therapy to the definitive restorations.</p>
